Allthenticate and Ping Identity's integration offers a revolutionary solution for enterprise security. It merges smartphone-based authentication with identity management, simplifying and securing access to digital and physical domains. It eliminates traditional passwords and reduces MFA fatigue, making it an ideal choice for modern enterprises.

Integration Capability: MFA, SSO

Benefits

- Seamless passwordless authentication
- Smartphone-based security
- Presence-based logins
- Decentralized authentication
- Flexible integration with OIDC and OAuth2.0
- Single Sign-On Capability
- Biometric and PIN-based authentication

Customer Profile

- Companies seeking to protect their digital and physical assets with a single solution.
- For organizations prioritizing both security and user convenience.
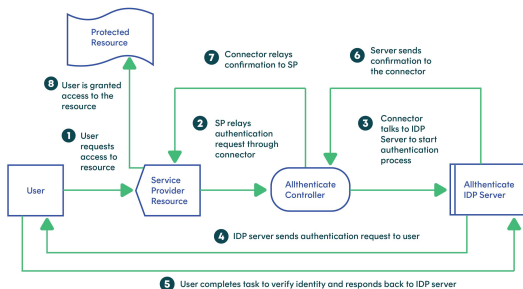

Integration Details

Allthenticate's OpenID SSO connector seamlessly integrates with PingOne DaVinci to provide a secure user authentication experience. This integration empowers users to utilize their smartphones as the primary means of authentication, offering an advanced suite of features, including presence-based logins, biometric and PIN-based authentication methods, and multi-factor authentication (MFA) fatigue defense. It's ideal for modern enterprises seeking efficient, user-friendly, and robust identity management solutions.

The Challenge

Integrating external IDPs into modern apps is complex and time-consuming for enterprises. Users face MFA fatigue due to the need for multiple verifications, and traditional IDP configurations lack flexibility.

The Solution

Allthenticate and Ping Identity have partnered to offer a passwordless authentication mechanism compatible across platforms. This integration simplifies the user sign-in process, enhances security, and provides a highly customizable, secure mobile credential system for enterprises to implement and manage effective identity solutions.

How Ping + Allthenticate Collaborate

Ping Identity and Allthenticate have partnered to integrate Allthenticate's passwordless authentication technology with PingOne DaVinci's orchestration capabilities. This collaboration aims to streamline security and offer a seamless user experience across physical and digital platforms.
